

**College of the Siskiyou**  
**Southern Oregon University Lower Division Major Requirements Transfer Guide**

## Engineering

05/18/09

Southern Oregon University offers a pre-professional program in engineering and wood science and technology that provides the necessary coursework for admission as a junior into professional engineering programs. Engineering students complete the lower division courses then transfer to a university engineering program.

Because each university engineering degree program has specific course requirements that students must meet before being admitted to the professional program, students should select a transfer university and then complete the lower division requirements for the desired engineering major at that university.

The pre-engineering advisors in the Physics Department at SOU or the COS advisors and counselors can help you select the courses that are appropriate for your goals.
